

PIONEERING NEW FRONTIERS AND NEW CLIMATIC REGIONS WITH EXISTING BC VARIETIES

Aleksandr Yareshchenko Deputy director of scientific work, PhD, currants breeder, Institute of Horticulture of the NAAS, Kyiv, Ukraine

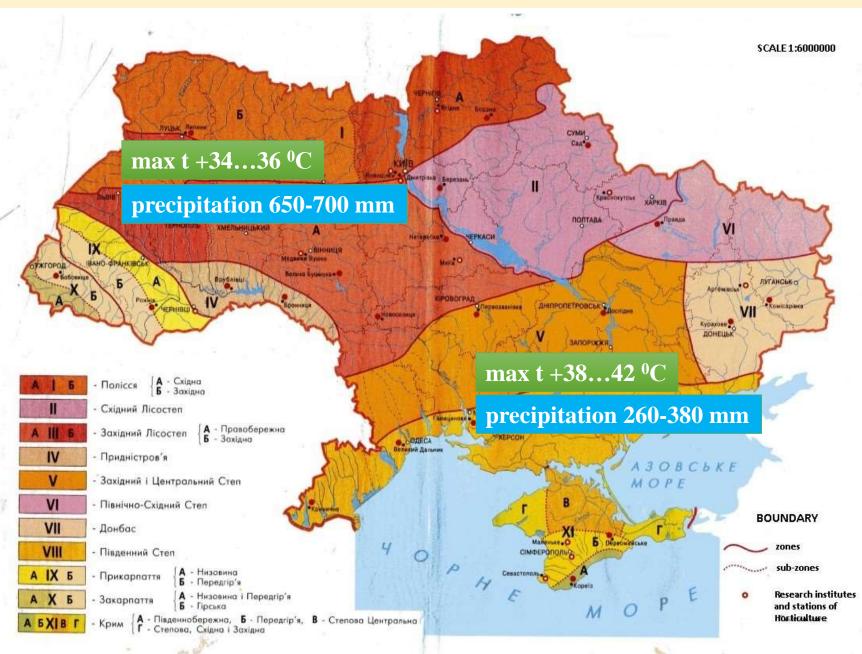

Structure of small fruit crop plantations in Ukraine*

* - official figure, small home orchards included, 2012

Climatic zones of fruit growing, Ukraine

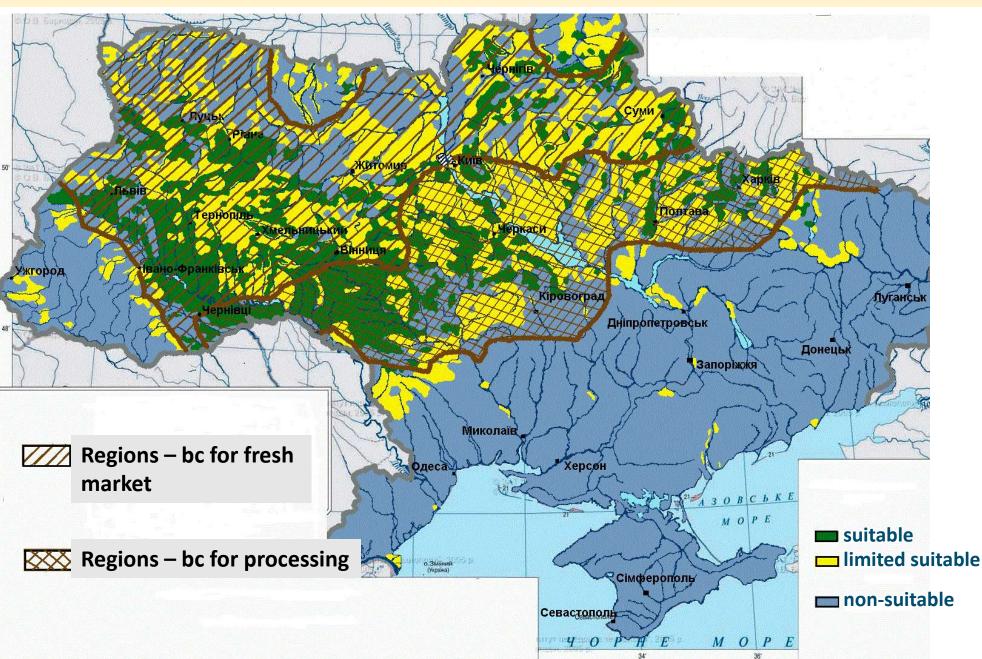

Territory of Ukraine is characterized by diversity of climatic and soil conditions that vary from wetlands to the west of **Polissya** to dry in the southern **Steppe** regions

Black currant in Ukraine

- Total acreage 5300 hectare (2012)
- Small fruit farms 2400 hectare
- Average yield in small fruit farms 7 ton/ha
- Total yield **35 000 ton** (2012)
- **30** black currant cultivars are presented in National Register (all from local breeding programs!)
- Institute of Horticulture NAAS owner of 14 bc cultivars

Suitability of Ukrainian regions for sustainable black currant growing*

Main regions of black currant growing in Ukraine*

*- including red currant (around 5-7% of total acreage)

Trends in Ukrainian BC growing industry – well tried varieties & new regions

- Environmental friendliness and adaptability
- The most popular varieties that can consistently produce fruit in different soil and climatic zones with minimal apply of pesticides (max. 2-3 treatments)
- Growers like to plant black currant in non-suitable regions on the South and South-East of Ukraine . There is permanent shortage of bc berries on the market of mentioned regions
- heat resistant varieties + additional expenses to maintain + risks still possible
- Dessert varieties are preferable
- > all-purpose consumption (processing and fresh market)

Environmental friendliness and adaptability - varieties

Main figures of propagation black currant in Ukraine

- Around 40 varieties are propagated
- > Total production of bc nurseries (2012 г.): **1,8 million plants**

Most propagated varieties: Yubileynaya Kopanya (600 thous. plants)
Wernisazh (324 thous. plants)
Sofievskaya (320 thous. plants)

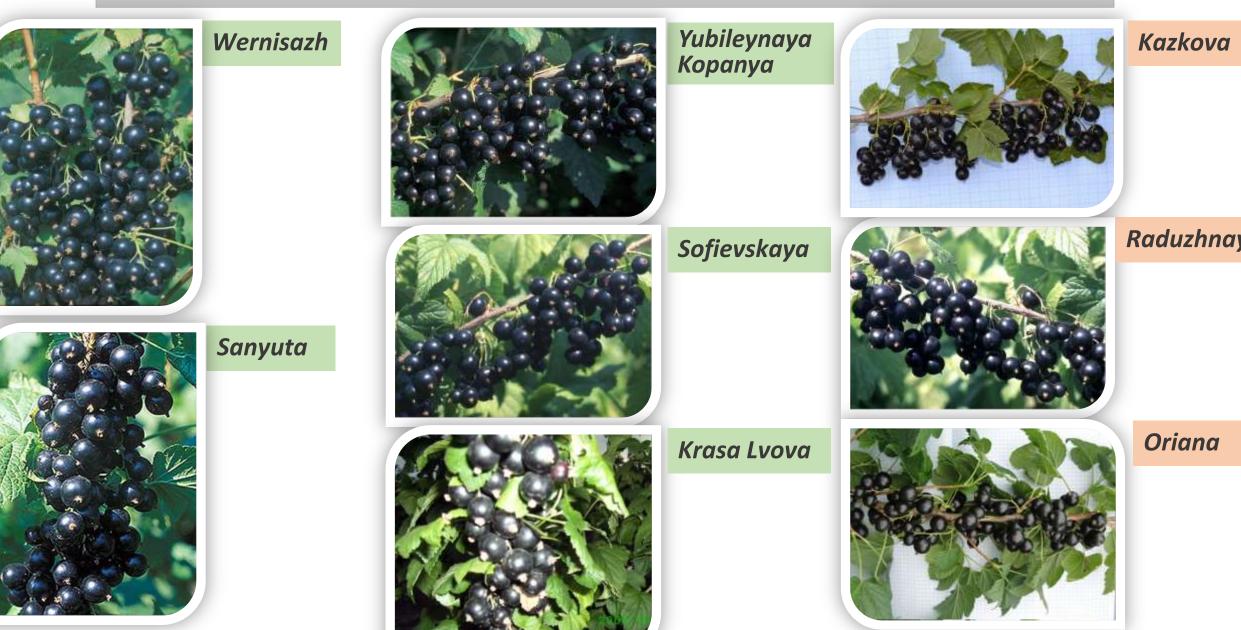

OR 70% produced plants !!!

Average wholesale price (2012): 0,5 – 0,6 EURO/plant

The most cultivated bc varieties in Ukraine

up to 80 % of total bc acreage planted with varieties bred by Institute of Horticulture !

Black currant – first fruiting (research plot, Institute of Horticulture, Kyiv, Ukraine)

Black currant – crop of moderate climate.

air drought (less 30 % RH)+ long-term temp. (above +30 °C) are harmful for bc plants > Threat of Verticillium albo-atrum

after a dry period precipitation falls and the temperature remains high

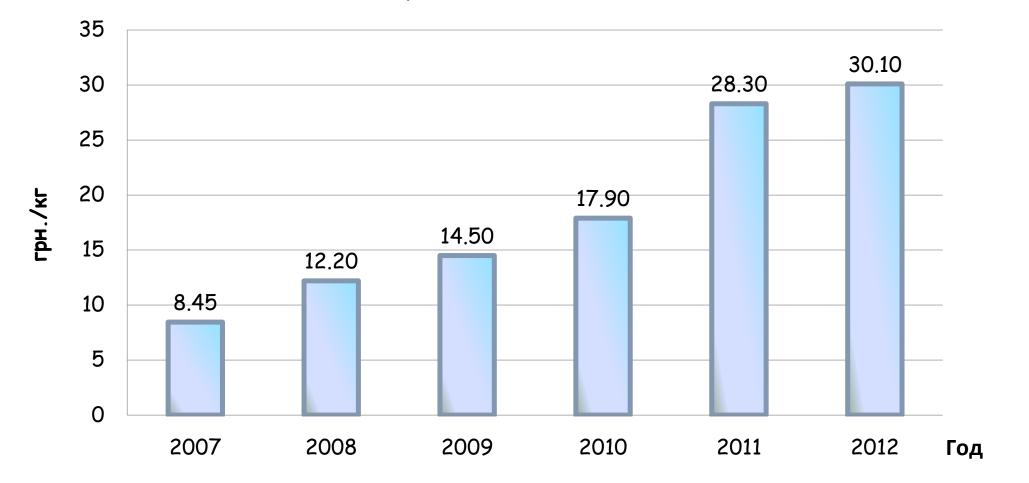

WHAT RECOMMENDED ?

✓ Plant heat-resistant varieties (Wernisazh, Yubileynaya Kopanya, Kazkova)

 Avoid the bc plants become stressed (shading plants, irrigation, mulching soil in-the-row lines)

✓ Applying of anti-transpirants and growth regulators – Atonik, Vapor Guard etc.

Retail selling prices for black currant berries in city markets of Ukraine

Thank you for attention!
